

KEY FEATURES

High Income Potential

DIV accesses 50 of the highest dividend paying equities in the United States, potentially increasing a portfolio's yield.

Monthly Distributions

DIV makes distributions on a monthly basis, and has made distributions each month for over six years.

Low Volatility

DIV's index methodology screens for equities that have exhibited low betas relative to the S&P 500 in an effort to produce low volatility returns.

The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. Returns for periods greater than one year are annualized. Market price returns are based upon the midpoint of the bid/ask spread at the close of the exchange and do not represent the returns you would receive if you traded shares at other times. For performance data current to the most recent month end, please call 1-888-493-8631, or visit www.globalxetfs.com.

DEFINITIONS

Indxx SuperDividend® U.S. Low Volatility Index	The Indxx SuperDividend® U.S. Low Volatility Index is maintained by INDXX, LLC. The Indxx SuperDividend® U.S. Low Volatility Index tracks the performance of 50 equally weighted common stocks, MLPs and REITs that rank among the highest dividend yielding equity securities in the United States, as defined by INDXX, LLC. The components of the Indxx SuperDividend® U.S. Low Volatility Index will have also paid dividends consistently over the last two years. The Indxx SuperDividend® U.S. Low Volatility Index is comprised of securities that INDXX, LLC determines to have lower relative volatility than the market.
S&P 500 Index	S&P 500 Index tracks the performance of 500 leading U.S. stocks and captures approximately 80% coverage of available U.S. market capitalization. It is widely regarded as the best single gauge of large-cap U.S. equities.
12-month Dividend Yield	The yield an investor would have received if they had held the fund over the last twelve months, assuming most recent NAV. The 12-month yield is calculated by summing any income distributions over the past twelve months and dividing by the sum of the most recent NAV.
Distribution Yield	The annual yield an investor would receive if the most recent fund distribution remained the same going forward. The yield represents a single distribution from the fund and does not represent total return of the fund. The distribution yield is calculated by annualizing the most recent distribution and dividing by the most recent fund NAV.
Annualized Volatility	The annualized standard deviation of the daily returns of the security using the closing levels of the index during the 22 index-day period preceding that day.
Beta	Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index. A beta below one suggests that the fund was less volatile than the market benchmark.
Sharpe Ratio	Measures the return for each unit of risk. The risk free rate is subtracted from the mean return and is divided by the standard deviation of returns.

Global X Management Company, LLC serves as an advisor to the Global X Funds. The Funds are distributed by SEI Investments Distribution Co. (SIDCO, 1 Freedom Valley Drive, Oaks, PA, 19456), which is not affiliated with Global X Management Company, LLC or Mirae Asset Global Investments.

Investing involves risk, including the possible loss of principal. High yielding stocks are often speculative, high-risk investments. These companies can be paying out more than they can support and may reduce their dividends or stop paying dividends at any time, which could have a material adverse effect on the stock price of these companies and the Fund's performance. The potential benefits of investing in MLPs depend on them being treated as partnerships for federal income tax purposes. Further, if the MLP is deemed to be a corporation then its income would be subject to federal taxation at the entity level, reducing the amount of cash available for distributions to the Fund which could result in a reduction of the Fund's value. The risks associated with real estate investment trusts including interest rate risk which may cause certain REIT holdings to decline in value if interest rates increase. REITs are subject to general risks related to real estate including default risk and the possibility of decreasing property values. The information provided is not intended for trading purposes, and should not be considered investment advice.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Global X NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.

Global X Funds are not sponsored, endorsed, issued, sold or promoted by Indxx, nor does Indxx make any representations regarding the advisability of investing in the Global X Funds. Neither SIDCO, Global X nor Mirae Asset Global Investments are affiliated with Indxx.
