

### KEY FEATURES

#### Volatility Enhances Income

Historically, as volatility rises, so too does the level of premium that can be generated on call writing.<sup>1</sup>

#### Monthly Distributions

HSPX has made distributions every month since inception.

#### Upside Growth Potential

HSPX writes 2% out-of-the money call options, which allows the Fund to potentially participate in some of the upside growth when the S&P 500 Index rises.

### FUND DETAILS

Inception Date	06/21/2013 <sup>2</sup>
Underlying Index	CBOE S&P 500® 2%OTM BuyWrite Index

The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. High short-term performance of the fund is unusual and investors should not expect such performance to be repeated. Returns for periods greater than one year are annualized. Market price returns are based upon the midpoint of the bid/ask spread at the close of the exchange and do not represent the returns you would receive if you traded shares at other times. For performance data current to the most recent month end, please call 1-888-493-8631, or visit [www.globalxetfs.com](http://www.globalxetfs.com).

## DEFINITIONS

CBOE S&P 500 <sup>®</sup> 2% OTM BuyWrite Index	The CBOE S&P 500 <sup>®</sup> 2% OTM BuyWrite Index is a benchmark index that measures the performance of a theoretical portfolio that holds a portfolio of the stocks included in the S&P 500 <sup>®</sup> Index ("S&P 500 Index"), and "writes" (or sells) a succession of one-month out-of-the-money S&P 500 Index covered call options.
S&P 500 Index	S&P 500 Index tracks the performance of 500 leading U.S. stocks and captures approximately 80% coverage of available U.S. market capitalization. It is widely regarded as the best single gauge of large-cap U.S. equities.
12-month Dividend Yield	The yield an investor would have received if they had held the fund over the last twelve months, assuming most recent NAV. The 12-month yield is calculated by summing any income distributions over the past twelve months and dividing by the sum of the most recent NAV.
Distribution Yield	The annual yield an investor would receive if the most recent fund distribution remained the same going forward. The yield represents a single distribution from the fund and does not represent total return of the fund. The distribution yield is calculated by annualizing the most recent distribution and dividing by the most recent fund NAV.
Annualized Volatility	The annualized standard deviation of the daily returns of the security using the closing levels of the index during the 22 index-day period preceding that day.
Beta	Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index. A beta below one suggests that the fund was less volatile than the market benchmark.
Sharpe Ratio	Measures the return for each unit of risk. The risk free rate is subtracted from the mean return and is divided by the standard deviation of returns.

(1) Covered call writing can limit the upside potential of the underlying security

(2) The Fund operated as the Horizons S&P 500<sup>®</sup> Covered Call ETF (the "Predecessor Fund"), a series of Horizons ETF Trust I, prior to the Fund's acquisition of the assets and assumption of the liabilities of the Predecessor Fund on December 24, 2018 (the "Reorganization").

(3) After the close of trading on 12/14/2017, HSPX switched its index from the S&P 500<sup>®</sup> Stock Covered Call Index (SPXCC Index) to the Cboe S&P 500 2% OTM BuyWrite Index (BXY Index). The BXY index is similar to the methodology used to calculate the SPXCC index, with one exception: In BXY the index uses Index options and in SPXCC the index uses single stock options. Returns reflect a blended benchmark.

(4) The Fund typically earns income dividends from stocks and interest from options premiums. These amounts, net of expenses, are typically passed along to Fund shareholders as dividends from net investment income. The Fund realizes capital gains from writing options and capital gains or losses whenever it sells securities. Any net realized long-term capital gains are distributed to shareholders as "capital gain distributions." HSPX collects dividends from the S&P 500 Index companies and monthly options premium from selling single index options on companies in the S&P 500 index, and portions have been passed to shareholders as monthly distributions. Portion of the distribution may include a return of capital. These do not imply rates for any future distributions. The ETF is not required to make distributions.

Global X Management Company, LLC serves as an advisor to the Global X Funds. The Funds are distributed by SEI Investments Distribution Co. (SIDCO, 1 Freedom Valley Drive, Oaks, PA, 19456), which is not affiliated with Global X Management Company, LLC or Mirae Asset Global Investments.

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject HSPX to loss due to adverse occurrences that may affect that industry or sector. Investors in HSPX should be willing to accept a high degree of volatility in the price of the fund's shares and the possibility of significant losses.

HSPX engages in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A covered call option involves holding a long position in a particular asset, in this case U.S. common equities, and writing a call option on that same asset with the goal of realizing additional income from the option premium. HSPX writes covered call index options on the S&P 500 Index. By selling covered call options, the fund limits its opportunity to profit from an increase in the price of the underlying index above the exercise price, but continues to bear the risk of a decline in the index. A liquid market may not exist for options held by the fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the indices current market price.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the fund. Brokerage commissions will reduce returns. Global X NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.

Global X Funds are not sponsored, endorsed, issued, sold or promoted by S&P or CBOE, nor do these entities make any representations regarding the advisability of investing in the Global X Funds. Neither SIDCO, Global X nor Mirae Asset Global Investments are affiliated with these entities.
